INTRODUCTION

The 2005 Nevada Legislature enacted the 2005-2007 biennial budget in a no new tax and no tax increase political environment. The 2005-2007 budgeting process was a very smooth process characterized by an excellent Nevada economy, growth and low unemployment. Budgeting in Nevada is driven by the basic fiscal conservatism of the state’s politics. Nevada’s budgetary politics have been highlighted since 1990, with one exception, by low levels of service provision, consistent under estimation of revenues, over reliance on two primary sources of revenue (sales and gaming taxes), and the potential for fiscal problems linked to the state’s population growth (Herzik, 1991; Herzik, 1992; Herzik and Statham, 1993; Morin, 1994; Herzik and Morin, 1995; Morin, 1996; Morin, 1997; Morin, 1998). Nevada continues to experience an excellent economic environment. A strong economy has produced economic growth, low levels of unemployment and strong revenue growth regarding the 2005-2007 biennial budget as Nevada enters the last half of the 2005-2006 fiscal year. Nevada is on track to raise more revenue than projected in the 2005-2007 biennial budget, fund all appropriations and realize a surplus at the end of the 2005-2007 biennium. 2006 will be the year of political change in Nevada. All six of Nevada’s statewide constitutional officer positions will be up for election in the 2006 General Election and no incumbents will be running for reelection. All of the State Assembly seats and half of the State Senate seats will be up for election in the 2006 General Election. This article shall examine the Nevada political environment, the state biennial budgeting process, the social and fiscal environment and the 2006 political season.

THE NEVADA POLITICAL ENVIRONMENT

The Nevada political environment is a composite of Nevada’s political culture, government structure and tax structure. The health of the national and state economies directly impacts the operation of state government. The Nevada Legislature and government are sensitive to public opinion, and Nevada’s biennial budget usually conforms to public opinion and the results of the preceding general election (Herzik and Morin, 1995; Morin, 2000).

Political Culture

Nevada’s political culture is individualistic. An individualistic political culture possesses a political environment where politics is an open market place where individuals and interest groups pursue social and economic goals (Elazar, 1984; Dye, 1994; Bowman and Kearney, 1996). Nevada’s political culture emphasizes limited government, fiscal conservatism, fragmentation of state governmental power and citizen control over
government at the ballot box. In terms of partisan politics, Nevada is becoming more Republican than Democrat. Nevada’s party competition classification in the 1970s was two-party Democratic dominant; however, in the 1980s this classification changed to two-party Republican leaning (Hrebenar and Benedict, 1991). In terms of party identification, a November-December 1996 poll revealed that southern Nevada leaned Democrat while northern and rural Nevada leaned Republican (Beal et al., 1997). Whether Republican or Democrat, Nevadans are politically conservative. The same 1996 poll showed that 75 percent of Nevadans identified themselves as moderate or conservative on economic issues and 72 percent identified themselves as moderate or conservative on social issues (Beal et al., 1997). Nevada continues to lean Republican. For the close of voter registration for the 2004 General Election, there were 429,808 registered Democrats, 434,239 registered Republicans and 161,620 registered as non-partisan. Southern Nevada continues to lean Democrat while northern and rural Nevada continues to lean Republican (Secretary of State, 2004).

Nevada’s political environment is conservative in budgeting and fiscal matters. Republican and Democrat legislators display fiscal conservatism in both the state Senate and the state Assembly (Morin, 1996; Herzik and Morin, 1995; Morin, 1994; Herzik and Statham, 1993). Nevada historically has provided a relatively low level of state services resulting in a low tax burden (Morin, 1996; Herzik and Morin, 1995; Morin, 1994; Herzik and Statham, 1993). In the past, Nevadans were not necessarily opposed to spending on state programs; however, Nevadans wanted others—visitors, tourists, gamblers and corporations—to bear much of the tax burden (Winter, Calder and Carns, 1993).

**Government Structure**

Nevada’s Constitution structures government at the state level by apportioning power between the legislative, executive and judicial branches (Driggs and Goodall, 1996). It provides for a weak, fragmented, and decentralized executive branch. The Governor, who possesses package veto power, shares executive power and authority with other elected executive officials, boards, commissions, and councils (Morin, 1997a; Driggs and Goodall, 1996). Nevada’s Constitution provides for a bicameral Legislature. The state Senate is comprised of 20 members serving 4-year terms. The state Assembly is comprised of 42 members serving 2-year terms (Titus, 1997; Driggs and Goodall, 1996). The Nevada Legislature meets on a biennial basis, is a citizen or amateur Legislature, and is one of a small number of state Legislatures to employ a biennial budget system (Morin, 1996; Herzik and Morin, 1995; Morin, 1994; Herzik, 1992, Thomas, 1991). The Nevada Legislature’s part-time status, low levels of staff support, and crowded agenda during a 120 day biennial session inadequately equips the Legislature to address long-term budgeting and policy issues in any significant manner (Morin, 1996; Herzik and Morin, 1995; Morin, 1994; Herzik, 1992).

The Nevada judicial branch consists of a seven member Supreme Court, district, family, justice and municipal courts. The state’s voters have repeatedly rejected proposed constitutional amendments to create an intermediate appellate court (Driggs and Goodall, 1996; Neilander, 1997). The Nevada Constitution specifically provides for the various types of courts; however, it grants considerable authority to the Nevada Legislature to determine
the structure and operation of the judicial system. Although elected officials of the legislative and executive branches run for office on a partisan ballot, all state and local judges are elected on a nonpartisan ballot by Nevada voters (Bushnell and Driggs, 1984).

Nevadans have a long tradition of taking matters into their own hands at the polls and have shaped the structure, operation and direction of state and local government. The Nevada Constitution provides for the recall of public officers, the initiative, and the referendum (Driggs and Goodall, 1996; Bushnell and Driggs, 1984).

Nevada’s governmental structure necessarily entails a lack of capacity to adequately respond to economic and budget problems. Heavy reliance upon gaming and sales tax revenue renders Nevada highly vulnerable to economic trends, which must be addressed by the Legislature more than once every two years (Morin, 1996; Herzik and Morin, 1995; Morin, 1994). Annual sessions of the Nevada Legislature, whether a regular annual session or an additional annual budgeting session, were supported by a majority of 60 percent in a December 1994 public opinion poll (Winter and Calder, 1995). A November-December 1996 public opinion poll revealed that 60 percent of Nevadans support the Legislature holding additional yearly sessions, with 23 percent supporting the existing biennial session arrangement (Beal et al., 1997). Presently, the Legislature employs an Interim Finance Committee in order to address fiscal and budget matters, which may arise between regular sessions. The Interim Finance Committee is comprised of members of the Senate Committee on Finance and the Assembly Committee on Ways and Means from the preceding legislative session (Legislative Counsel Bureau, 1997).

Tax and Fiscal Structure

Beginning in the late 1970s, Nevada moved from having a state and local revenue system characterized as more decentralized to having one more centralized than the average state and local revenue system in the United States (Ebel, 1990). In 1979, the Legislature enacted a tax relief package and, in response, Nevada voters defeated a constitutional initiative to limit local property taxes, which was similar to California’s Proposition 13 (Ebel, 1990). As a result, control of local revenues has been shifted from local elected officials to the Nevada Legislature and its Interim Finance Committee, and to the Nevada Tax Commission (Ebel, 1990). Nevada presently possesses one of the most centralized fiscal systems in the United States. The state controls, in one way or another, approximately 80 percent of the total revenues of local governments (Atkinson and Oleson, 1993). Fiscal centralization refers to the degree to which the state restricts local governmental autonomy to determine the level and mix of revenues and expenditures (Gold, 1989). Prior to the reduction in local property taxes in 1979 and a tax shift in 1981, only school district revenue was highly centralized, and local governments primarily survived on their own tax base (Ebel, 1990).

The Nevada Constitution requires a balanced budget for the state (Driggs and Goodall, 1996). Although the Nevada Constitution previously limited the level of state general obligation debt to one percent of the state’s assessed property value, Nevada voters approved a ballot question in 1996 which amended the Constitution to increase the limit to 2
percent (Ebel, 1990; Driggs and Goodall, 1996). Debt issued for the purpose of protecting or preserving the state’s property or natural resources is excepted from the two percent constitutional debt limit (Ebel, 1990).

Nevada relies on seven main types of taxes as sources of revenue for the state’s General Fund. The seven types of taxes include sales, gaming, casino entertainment, business license, mining, cigarette, and insurance premiums. Gaming and sales taxes accounted for 72.5 percent of all state General Fund revenue for Fiscal Year 1995-1996 (Legislative Counsel Bureau, 1997a). Gaming and sales taxes accounted for 62.6 percent of all state General Fund revenue for Fiscal Year 2003-2004 (Legislative Counsel Bureau, 2005). Earmarking, the dedication of certain tax revenues to specific programs, is popular in Nevada with both politicians and the public. Nevada is one of the most earmarked states in the United States (Ebel, 1990). Nevada ranks fifth among the 50 states, earmarking 52 percent of its total state tax revenues, which is almost two and a half times the earmarking rate of 21 percent of the average state (Gold, Erickson and Kissell, 1987). Earmarking presents three main disadvantages for state government. First, the Legislature lacks systematic review in the regular appropriation process. Second, earmarking reduces legislative flexibility in tailoring the budget to address economic changes. Third, once a revenue source has been earmarked, legislators may feel that they are absolved from further responsibility to appropriate additional General Fund revenues to the program (Winter, 1993; Thomas, 1991; Ebel, 1990).

Nevada does not have a personal income tax and the Legislature lacks any real ability to enact a personal income tax because Nevada voters passed a state constitutional prohibition on personal income taxation (Herzik, 1991). Nevada state law requires a five percent minimum balance of the General Fund at the end of each fiscal year that cannot be touched (O’Driscoll, 1994). Nevada lacks a unified budgeting and accounting system, which renders it quite difficult to examine the state’s finances in a comprehensive manner (Dobra, 1993). Over the course of the past 7 years, gaming and sales taxes have represented approximately 75 to 62 percent of all state revenue (Legislative Counsel Bureau, 2005; Morin, 1998; Morin, 1997; Morin, 1996; Herzik and Morin, 1995; Morin, 1994; Herzik, 1992). The only viable tax policy options available to the Legislature entail increased tax burdens on business, increasing the sales tax rate from 7.0 percent to a higher percentage rate, and increasing property taxes (Advisory Commission on Intergovernmental Relations, 1994; Dobra, 1993). The Legislature does have the option of increasing nontax revenues, such as charges for services, licenses, fees and fines (Legislative Counsel Bureau, 1997a).

THE NEVADA BUDGETING PROCESS

biennium (State of Nevada Economic Forum, 1994; Morin, 1994). The fortunes of Nevada’s economy in the 1990s and 2000s have paralleled the fortunes of the national economy. Over the past 30 years Nevada has prospered as long as the national economy has remained healthy (State of Nevada Economic Forum, 1996).

**State Budgeting Process**

The budget process in Nevada consists of four stages: (1) executive preparation and presentation, (2) legislative review and adoption, (3) implementation, and (4) review. The four stages are not discrete; they overlap with some activities occurring simultaneously (Driggs and Goodall, 1996). Stage one, executive preparation and presentation, begins in the spring of even-numbered years; which was the spring of 2004 for the 2005-2007 biennial budget. The state Budget Director, a gubernatorial appointee, requests that state agencies prepare their budget requests. Agencies are required to estimate their needs three and one-half years ahead of the end of the biennial budget. The state Budget Director may also provide guidelines for agencies to follow in the agency budget request formulation process (Driggs and Goodall, 1996; Reno Gazette-Journal, 1996). The guidelines may limit agency requests, such as a maximum increase of 4 percent over the existing biennial budget of the agency, and can also incorporate the Governor’s priorities for the upcoming biennium. The state Budget Director may convey to state agencies a governor’s directive that agencies are to hold the line or that there will be no new taxes (Driggs and Goodall, 1996).

All state agencies must submit their biennial budget requests to the state Budget Director by September 1 of the even-numbered years. The state Budget Director spends September through December examining the agency budget requests, meeting with each agency head, estimating how much revenue will be available for the biennium, and trying to put together a set of budget recommendations that will be acceptable to the Governor. The state Budget Director informs each agency head in December of the office’s preliminary budget for the agency. In the event an agency is unsatisfied with its preliminary budget, the agency has the right to make an appeal to the Governor. Agency budget requests are submitted to the Nevada Legislature by December 10 (Driggs and Goodall, 1996; Reno Gazette-Journal, 1996). State agency budgets are outside the one for the state’s building program. The State Public Works Manager receives state construction requests and must present a list of requested projects to the Governor by October 1 for ultimate inclusion in the Governor’s proposed executive budget (Reno Gazette-Journal, 1996).

Prior to 1993, the Governor was responsible for submitting a budget proposal to the Nevada Legislature containing his estimated forecast of future state General Fund revenues and proposed expenditures (Morin, 1997a). The 1991-1993 budget broke ranks with past budgets and adopted an aggressive 30 percent increase in state spending based upon a quite optimistic revenue estimate accepted by the Nevada Legislature and the Governor. Nevada’s break with conservative budget practices could not have been more poorly timed (Herzik and Morin, 1995). “Almost immediately after the fiscal year commenced, the effect of the National recession began to show up in Nevada. State revenue collections plunged and a hiring freeze was invoked. Over the next 18 months, state agencies suffered through three budget revertments” (Herzik and Statham, 1993:59). In response to the 1991-1993 biennial
budget crisis, the Nevada Legislature enacted legislation in 1993, which provided for the creation of an Economic Forum to estimate and forecast future state General Fund revenues. The Forum, a panel of five economic and taxation experts from the private sector, is required to adopt an official forecast of future state General Fund revenues for the biennial budget cycle. All agencies of the state, including the Governor and Nevada Legislature, are required to use the Forum’s forecast (State of Nevada Economic Forum, 1994). The Forum must provide its first forecast no later than December 1 of the even numbered years, just shortly before the beginning of a new legislative session (State of Nevada Economic Forum, 1996). This 1993 enactment effectively serves to reduce the scope of the Governor’s formal powers in preparing the budget.

The second stage of the budget process is legislative review and adoption, which begins with the Governor providing the Nevada Legislature with a general outline of priorities and the proposed executive budget in the State of the State address during the first week of the biennial legislative session. The proposed executive budget is delivered to the Nevada Legislature shortly after the Governor’s State of the State address (Driggs and Goodall, 1996). The 1995 Nevada Legislature attempted to directly challenge the executive branch’s institutional powers by proposing the establishment of a state legislative budget office, similar to the Congressional Budget Office, which would have been responsible for drafting its own version of the state budget for review by the money committees of the Assembly and Senate (Morin, 1997a). The Nevada Legislature and Governor Miller ultimately reached a compromise when Governor Miller threatened to veto the proposed legislative budget office. The compromise entailed giving legislative budget analysts more say in the preparation of the executive budget drafted by the Governor’s office; however, the compromise legislation contained a sunset clause providing that the legislation would be void after two years (Morin, 1997a). In accordance with this 1995 legislative enactment, the Fiscal Analysis Division of the Legislative Counsel Bureau provided the 1997 Nevada Legislature with its first report that provided legislators a summary of the financial status of the State and Governor Miller’s budget recommendations for the 1997-1999 biennium (Legislative Counsel Bureau, 1997a).

The legislative review process is centered almost entirely in the Senate Finance Committee and the Assembly Ways and Means Committee. State budgeting issues and the Governor’s budget recommendations are considered by these committees in the context of public hearings and are the subject of interest group and lobbying activities and the subject of discussion and compromises by state legislators (Driggs and Goodall, 1996). The Taxation Committee in each house considers tax bills and must act before the Assembly Ways and Means and Senate Finance Committees can finalize the biennial budget. Although the Economic Forum must provide its first forecast no later than December 1 of the even numbered years, the Forum is required to revise its forecast, if necessary, by May 1 during the legislative session. If either the Governor or the Nevada Legislature want to appropriate more than what is available pursuant to the Forum’s official forecast, a revenue enhancement proposal must be made (State of Nevada Economic Forum, 1996; Legislative Counsel Bureau, 1997a). A reconciliation process takes place between the two money committees prior to the budget going to the floors of the two houses for approval. Consideration of the budget by the full houses is almost always perfunctory (Driggs and Goodall, 1996).
The second stage of the budget process concludes with legislative passage of the biennial budget and presentation to the Governor for signature. The Governor lacks effective power to resist legislative changes in the budget that he prepares and presents to the Nevada Legislature. Nevada’s Governor is the only governor in the thirteen Western States to lack line-item veto power; therefore, he must sign or veto the budget passed by the Nevada Legislature as an entire package. Unlike the President, he lacks pocket veto power. Any bills vetoed by the Governor after the Nevada Legislature has adjourned its biennial session are subject to veto override attempts two years later when the Nevada Legislature meets again for its next regular session. A vetoed bill must receive a two-thirds vote of all members elected to each House in order to override a Governor’s veto and become law (Morin, 1997a; Driggs and Goodall, 1996).

The third stage of Nevada’s budgeting process is implementation and is the responsibility of the executive branch. The Nevada Legislature employs an Interim Finance Committee to address budget and fiscal matters which may arise between regular sessions. The Interim Finance Committee is comprised of members of the Senate Finance Committee and the Assembly Ways and Means Committee from the preceding legislative session (Driggs and Goodall, 1996; Legislative Counsel Bureau, 1997).

The fourth stage of Nevada’s budgeting process is review, which entails reviewing the past budget activities of state government. The state Controller audits claims against the state and the Legislative Auditor’s office also conducts periodic audits of the financial records of the various agencies. The state Budget Director and the Legislative Fiscal Analysts review past budgets when they prepare recommendations for the future. Lastly, the legislative money committees review past budget actions as they are considering and formulating the next, new biennial budget (Driggs and Goodall, 1996).

In 1991, the Nevada Legislature created a “rainy day” fund to help stabilize the state budget. This enactment created a state trust fund which would be built up during good times and would be accessed in the case of a fiscal emergency. When the state General Fund surplus reaches a certain threshold at the end of a fiscal year, a portion of the excess is held in the “rainy day” trust fund to help the state through fiscal emergencies (Herzik and Morin, 1995; Morin, 1996; Legislative Counsel Bureau, 1997a). In Fiscal Year 1993-1994, surplus General Funds exceeded the threshold and the state Controller transferred two-fifths (40 percent) of the excess to the rainy day fund. The actual transfer for Fiscal Year 1993-1994 was $18 million. The remaining three-fifths (60 percent) of the excess remained in the General Fund to satisfy supplemental and one-time appropriation needs as well as the state capital improvement program requirement. During the 1995 Nevada Legislature, Governor Miller proposed, and the Legislature approved, an appropriation of $81.9 million to bring the rainy day fund to $100 million (Herzik and Morin, 1995; Legislative Counsel Bureau, 1997a). The 1995 Nevada Legislature indexed the maximum limit on the rainy day fund to 10 percent of annual appropriations (Legislative Counsel Bureau, 1997a).
THE NEVADA SOCIAL AND FISCAL ENVIRONMENT

Social Environment

The Nevada social and fiscal environment has not changed very much over the course of the past decade. Nevada continues to experience rapid population growth and continues to provide a relatively low level of state services (Herzik, 1991; Morin, 2001). Nevada is the country’s fastest growing state. The 2000 Census showed that 1,998,257 people live in Nevada, a 66.3 percent increase since 1990 when Nevada had 1,201,833 residents. Nevada’s rapid population growth is attributable to the population growth of the Las Vegas metropolitan area. The Las Vegas metropolitan area was the nation’s fastest growing metropolitan area in the 1990s (Cox, 2000; Armas, 2000). Henderson and North Las Vegas, two Las Vegas metropolitan suburbs, were the fastest growing cities of at least 100,000 population during the 1990s. The population explosion in Las Vegas is brought about by an expansion in the casino industry, which then brings in small business (Cox, 2000; Armas, 2000).

Nevada has been one of the fastest growing states decade to decade after 1930 (Cox, 2000). The Nevada State Demographer predicted that Nevada will add 644,000 residents by 2010, increasing Nevada’s population to approximately 2.6 million residents. As in the recent past, most of the new residents will settle in Clark County, the Las Vegas metropolitan area. By 2010, it is projected that Clark County will have a population of 1.8 million (Smith, 2000). It appears as though the predictions of the Nevada State Demographer may be too conservative. 87.1 percent of Nevada’s 2.4 million population lives in two of the state’s seventeen counties; 71.2 percent of the state’s population, 1.7 million, lives in Clark County; and 15.9 percent of the state’s population, 383,453, lives in Washoe County (Nevada State Demographer, 2005).

Nevada’s social environment also includes an examination of quality of life. The United Way conducted a study that ranked Nevada 44th in the nation in the health and well-being of residents. The United Way conducted a 10-year study that measured trends in education, health, volunteerism, safety and natural environment. Nevada showed high rates of teen dropouts and pregnancies, residents living below the poverty line and medically uninsured children and adults than did most of the country (Guidos, 2000). The United Way report cited improvements in Nevada. The amount Nevada public schools spend per pupil increased and the number of pupils in each classroom decreased. The report showed a smaller gap between rich and poor when compared to the rest of the nation. Fewer people are unemployed in Nevada when compared to the rest of the nation; however, on a comparative basis, wages are not as high as in other areas of the nation. In 1988, the United Way study ranked Nevada 40th in the nation (Guidos, 2000).

K-12 education in Nevada is unequally distributed. Seventy percent of the students are served by the Clark County School District, with 16 percent being served by Washoe County School District and the remaining 14 percent being served by the remaining 15 rural school districts (McRobbie and Makkonen, 2005). Nevada’s school enrollment for K-12 grew 188 percent between 1970 and 2000. This represented the largest increase in school
enrollment in the United States and it is estimated that Nevada will continue to lead the nation in terms of enrollment growth over the course of the next decade. In Clark County, the rapidly increasing student population is changing ethnically, racially and socioeconomically. Fifty one percent of the students are of color and Hispanic students represent the fastest growing group. Many of the new students are immigrants, from poor families and are English learners. In part attributably to student enrollment growth and increasing student diversity, student achievement in Nevada is low. Nevada ranks near the bottom in state by state comparisons and significant achievement gaps persist among different racial, ethnic and socioeconomic groups (McRobbie and Makkonen, 2005). A recent study assigned low grades to the performance of the Nevada System of Higher Education on the basis of five indicators. Nevada earned a grade of D in terms of preparation, although the academic preparation of high school students has improved nationally over the past decade. Nevada earned a grade of C in terms of participation. Smaller proportions of young and working age adults are enrolling in postsecondary education. Nevada earned a grade of F in terms of affordability. Colleges and universities have become less affordable for students and families. Nevada earned a grade of F in terms of completion. This factor or indicator measures whether students make progress toward and complete certificates and degrees in a timely manner. Nevada earned a grade of C- in terms of benefits. This indicator measures what benefits a state receives as a result of having a highly educated population (The National Center for Public Policy and Higher Education, 2004).

Fiscal Environment

Nevada’s heavy reliance upon gaming and sales taxes for state revenue places Nevada in a position of being quite vulnerable to economic fluctuations. The fate of Nevada’s economy is contingent upon the state of the national economy (Morin, 2001). The nation’s economy began its tenth year of economic expansion in the spring of 2000 and through November 2000 the nation’s economy had continued to grow. The nation’s economy had been growing for 116 consecutive months, representing the longest expansion of the nation’s economy in the history of the United States (State of Nevada Economic Forum, 2000). The United States and Nevada experienced difficult times during the early 2000s. The United States economy has been continuously expanding since the official end of the last economic recession in November 2001. The Nevada State Economic Forum concluded in December 2004 that national forecasts for the unemployment rate, housing starts, the consumer price index and interest rates should result in a solid national economic performance throughout Nevada’s 2005-2007 biennium (State of Nevada Economic Forum, 2004). Nevada experienced economic difficulties as a result of a sharp downturn in the tourist economy following the 9-11 terrorist attacks. The Nevada economy has recovered from 9-11 and the 2001 recession. Visitor volume in the tourist driven Clark County economy has increased, a new mega-resort casino operation is being built in Las Vegas, Nevada’s payroll enrollment has increased and the unemployment rate is the lowest in more than 25 years. The State of Nevada Economic Forum concluded in December 2004 that the Nevada economy was in a position to continue its strong economic performance through the 2005-2007 biennium (State of Nevada Economic Forum, 2004).
Nevada’s economic performance has continued to be strong. Economic disruptions and energy price spikes experienced nationally because of the fall 2005 Gulf Coast hurricanes did not serve as a drag on the Nevada economy. Job growth continued, unemployment was low, gross gaming win increased and taxable sales also increased (Nevada Department of Employment, Training and Rehabilitation, 2005). In November of 2005, rural Nevada experienced a strong and growing economy. The world’s gold markets experienced a great increase in the price of gold. The price of gold averaged $271 per ounce in 2001; however, the price of gold reached over $500 per ounce in November of 2005. Since January of 2003, mining employment has increased by approximately 30 percent. Sustained high gold prices have been an economic boon for rural Nevada (Nevada Department of Employment, Training and Rehabilitation, 2005a).

The performance of the Nevada economy was impressive during 2005. Nevada led the United States in percentage job growth for the tenth time in the past 16 years. The 2005 average job growth percentage for Nevada was 6.3 percent, compared to 1.6 percent for the United States as a whole. Nevada’s 2005 average unemployment rate was 4.0 percent, compared to 5.1 percent for the United States as a whole. Nevada’s major industries performed at high levels. Nevada’s gross gaming win for November 2005 was up 16.0 percent from that for November 2004. Nevada’s taxable sales for October 2005 were up 9.3 percent from that for October of 2004. The construction industry and the retail sales sector also experienced growth and strong performances. Nevada’s gold mining industry experienced an excellent year in 2005, with gold prices at their highest levels in 25 years (Nevada Department of Employment, Training and Rehabilitation, 2006).

The performance of the Nevada economy continued to be impressive during 2006. In the first part of 2006 the average job growth percentage for Nevada was 6.1 percent, nearly quadrupled the national rate. Nevada’s unemployment rate was, for the first part of 2006, 3.8 percent, which was a full point below the national rate of 4.8 percent (O’Driscoll, 2006). Nevada’s taxable sales continued to increase during 2006 resulting in a very healthy sales tax revenue situation. Taxable sales increased because of the strength of construction related sales reflecting the continued building expansion in Nevada (O’Driscoll, 2006a). Nevada’s major industry, the gaming industry, continued to grow and performed at high levels during the first half of 2006.

In January of 2006, state gaming revenue posted a new record of $1.14 billion, which was up 24 percent from January of 2005 (Randazzo, 2006). In February of 2006, state gaming revenue was $1.03 billion, which was up 12.8 percent from February of 2005. Additionally, state collections from gaming revenue were 27 percent higher than what the state had projected for February of 2006 and 35 percent more than it was in February of 2005. As one would expect, the Nevada gaming revenue was driven, for the most part, by the 24 major Las Vegas Strip casinos (Randazzo, 2006a). In March of 2006, state gaming revenue was $1.06 billion, the second highest monthly amount of revenue on record, representing an increase of 3.4 percent over March of 2005. March of 2006 was the 20th consecutive month of growth for statewide gaming revenue (Randazzo, 2006b). 2005 was an excellent year for the Nevada economy and the prospects for an excellent Nevada economy in 2006 are quite positive. Increases in gaming and sales taxes have produced higher than
expected revenues. It is anticipated that a budget surplus as high as $521.5 million could reasonably be expected based upon the track record of gaming and sales tax collections. 2006 would constitute the fourth straight year of surpluses. The new Nevada Governor will enjoy a budget surplus in 2007 and the only question is how large the surplus will be ultimately (Damon, 2006; Damon, 2006a).

THE 2006 POLITICAL SEASON

2006 will be the year of political change in Nevada. All of the State Assembly seats and half of the State Senate seats are up for election in the 2006 General Election. The Clark County delegation will control almost 70 percent of both Houses of the 2007 Nevada Legislature. Nevada voters maintained a partisan status quo in terms of the composition of the 2005 Nevada State Legislature. The 2004 General Election produced a divided state government. Republican Governor Kenny Guinn faced a 2005 State Assembly controlled by the Democrats by a margin of 26 to 16 and a 2005 State Senate controlled by the Republicans by a margin of 12 to 9 (Legislative Counsel Bureau, 2005a).

Although it is much too early to predict the partisan composition of the 2007 Nevada Legislature, it can be determined that no incumbents will occupy statewide constitutional officer positions. Governor Guinn is not eligible to run for reelection due to term limits. Nevada shall hold its primary election on August 15, 2006. It is a heated and crowded field of candidates seeking to be elected Governor. Lieutenant Governor Lorraine Hunt is running against State Senator Bob Beers and Congressman Jim Gibbons in the Republican Primary Election for Governor. Henderson Mayor Jim Gibson and State Senator Dina Titus are running in the Democrat Primary Election for Governor. It appears as though primary elections will be held for Lieutenant Governor, Secretary of State, State Treasurer, State Controller and Attorney General for the Republican and Democrat parties. Although Attorney General Brian Sandoval resigned to become a Federal District Court Judge, the Secretary of State, State Treasurer and State Controller are all not eligible to run for reelection due to term limits. Secretary of State Dean Heller is running in the Republican Primary Election for the U.S. House of Representatives for the seat being vacated by Congressman Jim Gibbons. State Treasurer Brian Krolicki is running in the Republican Primary Election for Lieutenant Governor. State Controller Kathy Augustine is running in the Republican Primary Election for State Treasurer. Republicans currently hold all six constitutional officer positions. It may be difficult for the Republicans to hold all six of these positions with no incumbents running for reelection, due mainly to term limits.

Some issues are beginning to emerge as significant 2006 election issues. As usual, taxes shall be an issue. Some Republicans believe that Nevada is over-collecting on taxes. Some legislators want the property tax to be capped at 3 percent for those who own rental units. The 2005 Nevada Legislature capped the property tax at a 3 percent increase for homeowners and 8 percent for business. There are two proposed constitutional tax limit amendments, currently in the signature obtaining stage, which could appear on the 2006 General Election ballot. The first proposal is forwarded by State Senator Bob Beers, who is seeking the Republican nomination for Governor. Senator Beers’ TASC proposal would limit expenditures to inflation plus growth. The TASC proposal is basically tailored after TABOR
in Colorado. Assemblywoman Sharron Angle, who is seeking the Republican nomination for the U.S. House of Representatives seat being vacated by Congressman Jim Gibbons, is forwarding a proposal to limit the property tax that can be allowed (Ryan, 2006; Ralston, 2005).

Infrastructure issues will be dominant during the 2006 election season. Tremendous growth has resulted in demand for additional state highway construction, specifically in the Clark County area. Affordable housing in the Las Vegas area is a significant issue. School teachers are leaving Las Vegas because they cannot purchase houses. Schools represent a significant issue. School populations are increasing at a rapid rate. Additional school funding is needed. School construction is a pressing issue. The remodel of existing schools and the construction of new schools are required. School funding and construction issues are most pressing in Clark County. In a departure from usual legislative practice, for the first time a suggestion to use budget tax surplus funds to finance school construction is being seriously proposed and considered. Lastly, the lack of water will also emerge as a significant issue (Ryan, 2006; Hagar, 2006).

CONCLUSION

The 2003 Legislature revised revenue measures in order to raise new revenue and reduce Nevada’s reliance upon gaming and sales tax revenues (Legislative Counsel Bureau, 2005b). Governor Guinn and the 2005 Legislature returned to the comfortable biennial budgeting process of the 1990s where a strong national and state economy, coupled with additional growth and development, allowed for increases in spending based upon incremental increases in state revenue.

The budget approved by the 2005 Legislature was based upon the Economic Forum’s revised May 1, 2005 forecast. The net result of the revised forecast was an increase from the December 2004 forecast. The May 2005 revised forecast in General Fund revenues was $85,574,720 in FY 2004-2005, an increase of $95,139,793 in FY 2005-2006 and an increase of $84,978,293 in FY 2006-2007. The May 2005 report projected total Nevada General Fund revenues at $2.888 billion for FY 2005-2006 and $3.048 billion for FY 2006-2007 (State of Nevada Economic Forum, 2005).

The 2005 Legislature approved a General Fund operating budget for the 2005-2007 biennium that totals $5.798 billion. Governor Guinn recommended an operating budget that totaled $5.712 billion or approximately $85.9 million less than was approved by the 2005 Legislature (Legislative Counsel Bureau, 2005c). There really were no significant differences between Governor Guinn and the 2005 Legislature. Both branches were going to spend up to the revenue projections provided by the Economic Forum in December 2004 and then revised in May 2005. Spending increases were approved over the course of the 2005-2007 biennium for finance and administration and human services. Education will receive 54.2 percent of the total General Fund appropriations for the 2005-2007 biennium. Human services will receive 28.3 percent and public safety will receive 8.9 percent of the total General Fund appropriations for the 2005-2007 biennium (Legislative Counsel Bureau, 2005c). Gaming taxes are projected to constitute 27.3 percent of total general fund revenue.
for the 2005-2007 biennium and sales and use taxes are projected to constitute another 33.2 percent of total general fund revenue for the 2005-2007 biennium (Legislative Counsel Bureau, 2005c).

It really does not matter who is elected Governor and to the partisan structure of the 2007 Nevada Legislature. The new Governor and the 2007 Nevada Legislature will employ the comfortable biennial budgeting process of the 1990s that was employed by the 2005 Nevada Legislature. The unknown factor is the possibility of initiatives being placed on the 2006 General Election ballot regarding tax and spending limitations.
