

UTAH ECONOMIC AND BUSINESS REVIEW

VOLUME 60, NUMBERS 5 & 6

MAY/JUNE 2000

PERSONAL INCOME IN UTAH COUNTIES 1998

Personal income data provide important information highlighting the economic structure of Utah counties, as well as similarities and differences among the counties. For example, while per capita income in Utah for 1998 was \$22,240, or 81.8 percent of the U.S. per capita income of \$27,203, the variation among Utah counties ranged from \$39,645 per capita in Summit County, to a low of \$12,685 in San Juan County. Only two counties, Summit and Salt Lake have per capita incomes above the state-wide average while all other counties are below. Salt Lake County accounts for nearly one-half

(47%) of all personal income in Utah. Total personal income and per capita personal income by county for 1996-1998 are shown in Table 1.

Growth Sectors and Growth Counties

There are significant differences in the sources of personal income among Utah counties. Nonmetropolitan counties with higher percentages of elderly residents show a higher proportion of income from transfer payments, such as Social Security. Transfer payments represent 10.4 percent of income for Utah but account for 20 percent or more

of all income payments in Beaver, Carbon, Juab, Piute, San Juan and Sevier counties. Transfer payments account for only 3.5 percent of income payments in Summit County and 8.9 percent in Salt Lake County.

An examination of earnings by industry shows that over 99.5 percent of Utah earnings come from nonfarm activity while 0.5 percent comes from farm earnings. However, residents of seven counties receive 10 percent or more of earnings from agriculture: Piute (31.0%), Beaver (18.6%), Rich (15.2%), Wayne (12.3%), Millard (11.3%), Mor-

gan (10.2%) and Sanpete (10.0%). The mining sector orientation of Carbon, Duchesne, Emery and Uintah counties is shown by the share of earnings coming from that industry—31.2 percent for Emery, 22.5 percent for Carbon, 20.8 percent for Uintah and 15.4 percent for Duchesne.

The services sector is Utah's largest industry, accounting for nearly 27 percent of all earnings. Government and manu-

facturing are the second and third largest sectors accounting for 18.2 and 13.9 percent of earnings, respectively. Retail trade is the fourth largest sector and accounts for 10.3 percent of earnings. An examination of Table 3 illustrates the wide variations among Utah counties in the share of earnings within the county that come from various industries.

Counties with a large share of earnings from

manufacturing are Box Elder (56.8%), Cache (26.9%), Weber (21.6%), Juab (19.4%), Morgan (18.6%) and Utah (15.2%). The federal government is a major source of earnings for four counties—Daggett at 34.0 percent, Tooele (25.9%), Davis (19.9%) and Wayne (16.4%). When state and local government are added to federal government activity, total government-generated earnings reaches 64.0 percent for Daggett, 37.8 percent for

Tooele, 37.6 percent for San Juan, 37.5 percent for Piute and 36.6 percent for Rich. Looking only at state and local government earnings, six counties—Piute (34.4%), Rich (32.5%), Sanpete (30.8%), Daggett (29.5%), San Juan (28.6%) and Duchesne (27.3%)—all receive more than 25 percent of earnings from this source.

The high growth sectors of the Utah economy as measured by personal income and earnings between 1997 and 1998 were: finance, insurance and real estate (11.6%), agricultural services (9.3%), wholesale trade (9.3%) and services (8.8%). The one industrial sector that declined in personal income and earnings in 1998 was mining, which was down 1.1 percent.

Growth in Utah's personal income between 1997 and 1998 was 6.7 percent. Counties that posted growth in personal income at higher rates than the state average were Beaver, Box Elder, Davis, Grand, Iron, Kane, Morgan, Piute, San Juan, Sanpete, Summit, Tooele, Utah, Wasatch, Washington and Wayne. Personal income in Salt Lake County increased less than the state average at 6.3 percent.

Careful study of the tables for each county will provide insights into the relative importance of each of the major industries within the county as well as the importance of sources such as dividends, interest and rental income. These tables are pub-

lished annually to provide information on the sources of income and earnings for each of Utah's counties.

Personal Income and Its Components

The Bureau of Economic and Business Research at the University of Utah publishes these data from data prepared by the Bureau of Economic Analysis in the U.S. Department of Commerce. Table 3 presents the most recent BEA county personal income estimates for Utah.

Personal income is defined by the BEA to comprise the money value of current income received from all sources by, or on behalf of, persons residing in a given geographical area, including income received in both monetary and non-monetary forms. Specifically, personal income consists of:

- ! Wage and salary disbursements, excluding social security taxes and other personal contributions for social insurance paid by employees.
- ! Other labor income, which consists of employer contributions for private life and medical insurance, private retirement programs and other private "fringe" benefits.
- ! Net income of owners of unincorporated enterprises, excluding self-employed contributions for social security and other social insurance.

! Property income, including dividends, interest and rent.

! Transfer payments, i.e., personal payments by government or business for which no services are currently rendered.

Income derived from participation in the work force is referred to as *labor and proprietors' income* or *earnings* and includes (1) wage and salary disbursements, (2) other labor income and (3) net income of owners of unincorporated enterprises. *Net labor and proprietors' income* or *net earnings* is derived by deducting social security taxes and other social insurance contributions paid by workers, including self-employment contributions paid by owners of unincorporated enterprises. Since wage and salary disbursements and other labor income are reported on a place-of-work basis, labor and proprietors' income must be adjusted for the effect of inter-area commuting in order to arrive at the earnings component of personal income (which is defined on a place-of-residence basis). This adjustment is accomplished by estimating the difference between the net earnings of persons who reside in a given area but who work in other areas and the net earnings of persons who work in the given area but reside in other areas. This difference is referred to as the *residence adjustment*.

Per Capita Personal Income

A per capita personal income time series for the State of Utah from 1980 to 1999 is presented in Table 2. These data show that Utah's position was 83 percent of the national average in 1980, but in 1989 slipped to 75 percent. Since 1990 Utah has been making a comeback, with Utah's per capita personal income at 82 percent of the national average since 1997.

Per capita personal income figures for Utah counties in 1998 appear in Table 3 (as the second line item).

Table 2
Utah Per Capita Personal Income
1980-1999

Year	Amount (dollars)	Percent of U.S. Average	State Rank
1980	8,464	83	39

Technical Notes

BEA Income Imputations

The BEA personal income estimates include imputations or allowances for the value of certain types of income realizations, even though no monetary transaction is involved. These include imputations for:

- ! wages and salaries paid in kind, i.e., in the form of food, clothing or lodging;
- ! rental value of owner-occupied dwelling units; food and fuel produced and consumed on farms; and
- ! interest earned on money deposited with financial intermediaries for which

no interest is actually paid or credited.

This last item includes, for example, an imputation for the interest earning potential of ordinary bank demand deposit accounts, even though banks do not ordinarily pay interest on such accounts. For the state, imputed interest amounts to roughly 35 percent of total interest.

BEA Person Concept

Personal income as defined by the Bureau of Economic Analysis includes the income of certain legal entities not ordinarily regarded as "persons," including nonprofit institutions serving individuals, private non-insured pen-

sion funds, health and welfare funds and private trust funds. In effect, the current earnings of these organizations are credited directly to the ultimate beneficiaries for personal income accounting purposes. Since such organizations are considered to be persons, benefit payments by them to individuals are considered to be transfer payments between persons and not part of personal income. The undistributed earnings of life insurance carriers and private non-insured pension funds are also credited to persons for personal income accounting purposes.
