

Ivory-Boyer CONSTRUCTION REPORT

For the sixth consecutive year, permit authorized construction increased in Utah. The value for all types of permit authorized construction totaled \$8.17 billion, the second highest value in Utah's history (inflation adjusted dollars) (see Figure 1). Construction value in 2016 was driven above \$8 billion by the single largest building permit in several years. In December, Salt Lake City issued a permit for \$566 million for redevelopment of the Salt Lake City International Airport. This permit, the first received for the Terminal Redevelopment Program (TRP), represents only a portion of the ultimate cost of airport's redevelopment of \$2.9 billion. The first phase of the TRP is due for completion in late 2020.

The TRP will be the second largest construction project in Utah's history, surpassed only by the 1,900 MW Intermountain Power Plant built in the mid-1980s in Millard County. It's important to point out that even without the airport permit, total construction value in Utah in 2016 was up 11 percent over 2015 and the fourth highest year in history. With the airport permit included, the total value of construction was up 21 percent in 2016 (see Table 1).

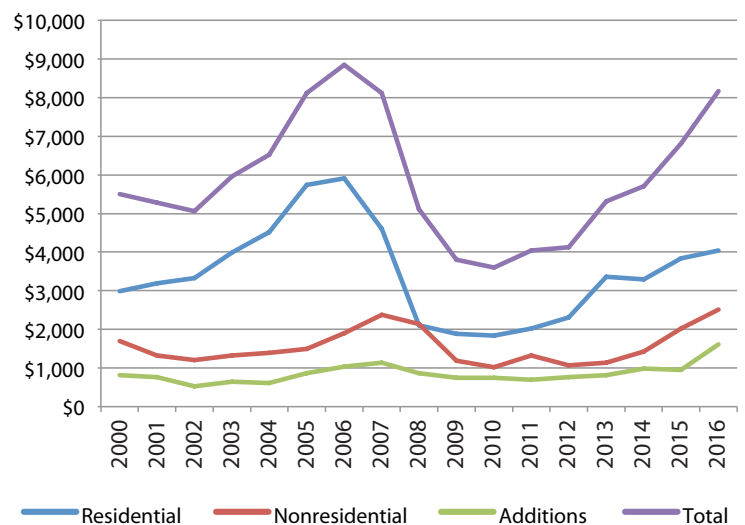

All of the major construction indicators were up in 2016, with the exception of the value for single-family homes. The number of single-family units, however, was up nearly 9 percent, but the construction value was down slightly, a little more than 2 percent, as builders offered more moderately priced homes.

The demand for more affordable housing is clearly shifting the composition of residential construction. Forty-five percent of new residential construction was captured by condominiums, town homes and apartments. Condominium and town home construction was up 21 percent to 3,028 units, while apartment construction was up nearly 15 percent to 5,735 units.

Nonresidential construction had another exceptional year with total value up 25 percent to \$2.5 billion and additions, alterations and repairs hit a record level of \$1.6 billion due to the redevelopment of the Salt Lake City International Airport.

This year-end report includes a narrative summary of the past year for residential and nonresidential construction as well as a forecast for 2017. In addition, a summary table on statewide activity is included as well as detailed data on construction activity in counties and cities (see Tables 2 and 3).

Residential Construction

In 2016, the value of residential construction increased to \$4 billion, 7 percent higher than 2015, while the number of dwelling units receiving building permits was up 11 percent to 19,532 units (see Figure 2). Residential construction includes single-family homes and multifamily units, which includes condominiums, town homes and apartments. In 2016, single-family construction increased to 10,579 units, the highest level since 2007 (see Figure 2). Even so, the number of new single-family units continues to be well below construction activity prior to 2008. During the 15-year stretch from 1993 to 2007, the number of single-family homes receiving building permits averaged 15,300 units, well above the single-family level in 2016.

Eighty-three percent of all residential construction in the state in 2016 was located in four counties: Salt Lake County with 8,305 new dwelling units accounted for 43 percent of all new residential units statewide, Utah County (3,988 units) ranked second with a 20 percent share, followed by Washington County (2,165 units) with an 11 percent share and Davis County (1,721 units) with an 8.8 percent share. Washington County's residential construction was up 30 percent in 2016 to the highest level in 11 years.

The demand for housing appears to be outpacing supply. All housing markets; rental market, existing "for sale" home market, and new home market, show signs of stress related to a housing shortage. Rental vacancy rates are low, existing homes are typically sold with a few days of listing and home builders are "flat out" trying to keep up with demand. The home builder is hampered by three supply bottlenecks that are holding back new construction: labor shortage, high land costs and local regulations and zoning ordinances. For the first time in over 40 years, the increase in households in Utah is greater than the number of new housing units built. The projection for household growth in 2017 is above 25,000, but it is unlikely that Utah's home building industry can produce more than 21,000 new homes given the supply bottlenecks facing builders.

Figure 3
Building Permits Issued in Utah for Apartment Units

Source: Ivory-Boyer Construction Database, Kem C. Gardner Policy Institute.

In recent years, the affordability of owner occupied housing has become more of an issue pushing a larger share of households into the rental market. Consequently, Utah has been in an apartment development boom over the past few years. In 2014, apartment construction suddenly took off with an increase of 265 percent over the previous year as apartment unit permits hit a 30-year high of 6,700 units. Activity slowed in 2015 to 5,026 units, but increased again in 2016 as permits were issued for 5,735 apartment units (see Figure 3).

Over the past three years, nearly 17,500 new apartment units have received building permits statewide, an extraordinarily high level of apartment construction. The growing preference (or in many cases, necessity) for rental housing is one of the structural changes underway in the housing market. Vacancy rates in most rental markets throughout the state are below 5 percent, rental rates are increasing at 4 to 5 percent annually, and the absorption rate of new units is brisk. The apartment boom is concentrated in Salt Lake and Utah Counties, which together account for nearly 85 percent of the new apartment construction over the past three years. In 2016 Salt Lake County had 4,465 permits issued for apartment units, the highest number of rental units for either Salt Lake or Utah County during the apartment boom.

Nonresidential Construction

Total value of nonresidential construction hit a historic high of \$2.5 billion in 2016, 4 percent above the previous high of \$2.4 billion in 2007 (inflation adjusted) and 25 percent above 2015, which was an exceptional year for nonresidential construction (see Figure 4). Over the past three years, the value of nonresidential construction activity has more than doubled. This recent surge in construction follows several years of strong employment and demographic growth, which has created demand for more office, industrial and retail space as well as increased the demand for large nonprofit construction such as hospitals.

Figure 7
Value of New Industrial Building Construction in Utah
 (2016 dollars - millions)

Source: Ivory-Boyer Construction Database, Kem C. Gardner Policy Institute.

Utah's nonresidential construction sector was led by hospital construction in 2016. Permits were issued for \$544 million in hospital construction, including the \$148 million expansion of the Dixie Regional Medical Center in St. George and the \$214 million expansion of the Utah Valley Hospital in Provo. Construction values for other major sectors were \$380 million for office buildings, \$270 million for retail buildings and \$287 million for industrial buildings.

The office sector had a very strong year in 2016. The value of new office construction was \$381 million, ranking as the third highest year ever (inflation adjusted), surpassed only by activity in 2007 and 2001 (see Figure 5). After seven years of lackluster performance, the retail sector finally had a solid upturn with \$270 million in new construction (see Figure 6). The industrial sector had a substantial drop in value from 2015, falling from \$506 million (an all-time high) to \$287 million in 2016 (see Figure 7). It's important to remember that industrial construction in 2015 received a substantial boost from the

anomalous \$216 million Holly Frontier oil refinery in Davis County. When placed in a long-term context, the 2016 value for industrial construction near \$300 million was very respectable.

2017 Forecast

The forecast for permit authorized construction in Utah in 2017 is \$7.5 billion, down about 8 percent from 2016. This forecast assumes there will not be another permit for the Salt Lake City International Airport's TRP in 2017.

The value of residential construction is expected to increase by 11 percent to \$4.5 billion. Cost increases will push residential value higher, but more important is the increase in the number of residential units, which is forecast to increase from 19,500 units in 2016 to 21,000 units in 2017. Most of the increase in residential construction will be concentrated in single-family homes, which is forecast to be up 17 percent to 12,500 units. Multifamily permits will likely decline 3 percent to 8,500 units as apartment development activity slows, but will be partially

offset by a continued increase in condominium and town home units.

The value of permit authorized nonresidential construction in 2017 is forecast to fall by 20 percent to \$2 billion. This decline does not signal weakness in the overall nonresidential market, but rather the absence of the one-time boost from large hospital projects that supported the record level of nonresidential construction in 2016. In 2017, the traditional

sectors of nonresidential construction—office, industrial, and retail—will have solid performances, benefitting from Utah’s strong job market, expanding population and favorable market conditions.

In summary, the \$7.5 billion in permit authorized construction activity in 2017 is forecast to include \$4.5 billion of residential construction, \$2 billion of nonresidential construction and \$1 billion of additions, alterations and repairs.
