#### Endnotes

1. The variation among the top five state scores is 1.6 points. The Hachman Index is not an exact measure and small differences are not definitive. When comparing state scores, the exact score is less important than the rank and size of the variation in scores relative to other states.
2. When ranking state economies by size using total GDP, California is the largest in the nation, Colorado ranks 16th, and Arizona ranks 20th. Utah ranks as the 31st largest state economy.
3. When ranking the state economies by size using total GDP, Oklahoma (29th) and Iowa (30th) rank just larger than Utah, and Nevada (32nd) and Kansas (33rd) rank just smaller.
4. Duchesne has the highest location quotient of all counties in the state at 42.8, followed by Uintah at 30. The next highest is Carbon at 20, all well above other counties in the state.
