Salt Lake City’s Foreign-Born Residents: Demographics of a Dynamic Population

Changes in the composition and characteristics of Salt Lake City’s foreign-born population have resulted in an older, more educated, and more globally diverse population than in previous decades.

June 2023
Salt Lake City’s Foreign-Born Residents: Demographics of a Dynamic Population

Analysis in Brief
Salt Lake City’s population includes over 30,000 residents born outside the United States. Today’s foreign-born city residents are older, more highly educated, more economically stable, and more fluent in English than foreign-born residents ten years ago. Foreign-born Salt Lake City residents account for 15% of the city population and 17% of the city’s labor force. Most are working-age adults born in Latin America or Asia who speak English and have lived in the United States for more than a decade.

Key Findings
- **Increasing Asian-born share**: Individuals born in Latin America compose the largest group of foreign-born residents (47%), but between the 2007-2011 and 2017-2021 estimate periods this share fell from 56% while the Asian-born share of Salt Lake City’s foreign-born population increased from 19% to 27%.
- **Strong English language ability**: Over three-quarters of Salt Lake City’s foreign-born residents speak English “well” or “very well,” including 17% who speak English as their only language.
- **Growing educational attainment**: Almost one-third (32%) of foreign-born Salt Lake City residents over age 25 hold bachelor’s degrees. Among the foreign-born population who entered the U.S. after 2009 this share increases to 49%.
- **Rising economic stability**: Incomes for foreign-born led households increased during the past decade, but these households still earn a median income $15,000 below native-born led households and experience poverty at higher rates.

Who are foreign-born residents?
The U.S. Census Bureau uses the term foreign-born to refer to anyone who is not a U.S. citizen at birth. This includes naturalized U.S. citizens, non-citizen U.S. nationals, lawful permanent residents (immigrants), temporary migrants (such as foreign students), humanitarian migrants (such as refugees and asylees), and unauthorized migrants.⁠¹

Table 1: Changes in Age, Race, and Households of Salt Lake City’s Foreign-Born Population, 2007-2011, 2012-2016, and 2017-2021 ........................................ 11
More than 30,400 foreign-born individuals live in Salt Lake City, according to the most recent American Community Survey 5-year estimates (2017-2021). Salt Lake City features the largest foreign-born population of any city in Utah and is home to 11% of Utah’s foreign-born population.

Foreign-born individuals represent 15% of Salt Lake City’s total population. Only four other Utah cities with populations over 25,000 surpass this concentration of foreign-born residents: South Salt Lake City (26%), West Valley City (22%), Kearns (19%), and Taylorsville (18%).

Over two-thirds of foreign-born Salt Lake City residents have lived in the United States for more than a decade. Among Salt Lake City’s foreign-born residents, 43% entered the U.S. prior to 2000, 26% entered between 2000 and 2009, and 31% entered in 2010 or later.

Nearly 38% of Salt Lake City’s foreign-born residents are naturalized citizens. Those who have lived in the United States longest are most likely to have completed the citizenship process, with 61% of those who arrived before 2000 gaining citizenship compared to 34% of those who entered between 2000 and 2009 and 9% of those who entered in 2010 or later. Residency requirements, wait times, and changes in U.S. naturalization policy may be related to these differences.

Changes in Foreign-Born Population

Salt Lake City’s foreign-born population decreased by more than 3,000 residents, or by 9%, between the 2012-2016 and 2017-2021 estimate periods. Global disruptions related to the COVID-19 pandemic likely contributed to this decline. During the same period, the total city population grew by more than 7,700 residents, causing the foreign-born share of the city population to fall from 17.5% to 15.3%.
Where do Salt Lake City’s foreign-born residents live?

Half of Salt Lake City’s foreign-born residents live in the 11 census tracts west of I-15, home to 30% of the city population. The other half of foreign-born residents live throughout the 43 census tracts east of the interstate, with higher concentrations of foreign-born residents living near the Gateway, in Central City, and near the University of Utah. Foreign-born residents make up a comparatively small share of the population in the Upper Avenues and the city’s southeast quadrant, including Sugarhouse and the surrounding neighborhoods.
Region of Origin

Nearly half (47%) of foreign-born residents in Salt Lake City were born in Latin America. Another 27% were born in Asia. The remaining 26% of Salt Lake City’s foreign-born population were born in Europe (13%), Africa (6%), Oceania (4%), and Northern America (3%).

Over 14,000 Salt Lake City residents were born in Latin America. More than two-thirds of these residents (68%) were born in Mexico. Nearly one-in-five Latin American-born residents (19%) were born in South America. An additional 10% were born in Central America (excluding Mexico) and 3% in the Caribbean. Common countries of origin, besides Mexico, include Colombia, Guatemala, Peru, Brazil, and El Salvador.

Asian-born residents compose the second-largest foreign-born population in Salt Lake City, with more than 8,000 residents. Among Asian-born residents, one in three (34%) were born in South Eastern Asia, most often in Vietnam, Thailand, or the Philippines. An additional 31% were born in South Central Asia, most commonly in India or Pakistan. Another 29% of Asian-born Salt Lake City residents were born in Eastern Asia, most often in China, Japan, or North or South Korea. The final 6% originate in Western Asia.

Changes in Foreign-Born Region of Origin

The Census Bureau divides the foreign-born population into three groups based on the timing of when they entered the United States: those who entered before 2000, from 2000 to 2009, and in 2010 or later. Grouping foreign-born residents this way reveals two large shifts in the origins of Salt Lake City’s foreign-born population since the 2000 to 2009 period—an increase in the share of Asian-born residents and a decrease in the share of Latin American-born residents.

A comparison of residents who entered the U.S. before and after 2000 highlights increases in the share of African-born residents and decreases in the share of residents born in Europe and Oceania.

Shifts within these regional groups occur over time, as well. Mexican-born residents compose almost three-quarters of Latin American city residents who arrived in the U.S. prior to 2010, but less than half of those who came in 2010 or later. Latin American-born residents who arrived during the last decade are much more likely to originate in South America or the Caribbean than foreign-born residents who arrived previously.
Salt Lake City's Foreign-born Population: 1900 to 2020

Two waves of immigration bookend the 20th Century in Salt Lake City.

Salt Lake City’s foreign-born population increased rapidly between 1900 and 1910 in response to abundant job opportunities in Utah’s mills, railroads, mines, and smelters.* By 1920 immigration slowed, followed by three decades of suppressed foreign-born population growth driven by economic depressions, World War II, and anti-foreign sentiment.† New foreign-born residents began arriving in the 1950s, but high mortality rates for the city’s historic foreign-born population countered population growth.‡ After a long plateau, the 1990s brought an immigration boom that more than doubled the city’s foreign-born population, increasing the share of foreign-born residents to levels unseen since 1920.§

Salt Lake City’s foreign-born population transformed from a community of Northwestern Europeans to a diverse global population.

- Large foreign-born populations from Britain and Scandinavia initially settled in Salt Lake City. Immigrants from continental Europe joined them in the early 1900s.
- Beginning in the 1970s, immigrants from Asia, Oceania, and the Americas began relocating to Salt Lake City at higher rates, replacing aging European immigrants.
- During the 1990s, the number of foreign-born Salt Lake City residents from the Americas grew from nearly 3,500 to more than 19,200. These residents remain the largest foreign-born group today.

Figure 8: Salt Lake City Foreign-Born Population and Share of City Population, 1900-2021

Note: Census Data for 1900 through 1950 reports estimates for the “Foreign-Born White” population and likely excludes many foreign-born individuals, especially those from Asia.
Sources: U.S. Census Bureau, 1900-2010 Decennial Census; U.S. Census Bureau, 2017-2021 American Community Survey 5-Year Estimates

Figure 9: Share of Foreign-Born Salt Lake City Residents Born in Britain and Scandinavia, 1900-1970

Note: Britain includes England, Scotland, Wales, Northern Ireland, and Ireland. Scandinavia includes Norway, Sweden, and Denmark. Census Data for 1900 through 1950 reports estimates for the “Foreign-Born White” population and likely excludes many foreign-born individuals, especially those from Asia.

Residential Patterns by Region of Origin

High shares of foreign-born residents from Latin America and Oceania live in neighborhoods west of I-15. Residents born in Oceania most often reside in Glendale, Poplar Grove, Jordan Meadows, and Westpointe neighborhoods. Latin American-born residents live more uniformly across tracts west of I-15, with especially high shares in Glendale and Fairpark.

In contrast, residents born in Asia, Africa, Europe, and Northern America are more dispersed throughout Salt Lake City. High shares of Asian-born residents reside in multiple neighborhoods west of I-15, including Rose Park and Glendale, but also in tracts near the University of Utah. High shares of African-born residents live in Fairpark and Westpointe, as well as parts of Glendale, Central City, and Sugarhouse. A high percentage of foreign-born residents from Northern America live on the East Bench, though many also live in Liberty Wells, the Avenues, and Rose Park. European-born residents are the most evenly distributed throughout Salt Lake City, with slightly higher shares in Rose Park, the East Bench, Federal Heights, and neighborhoods south of I-80.

Demographic Characteristics: Age, Race, and Households

Age
Salt Lake City’s foreign-born population is significantly older than the city population overall, with a median age of 38.7 compared to 32.4 citywide. Two key factors contribute to this higher median age. First, the city’s foreign-born population includes a high proportion of working-age adults. Nearly 72% of foreign-born Salt Lake City residents are 25 to 64 years old, compared to 55% of the city population overall. Second, the foreign-born youth population is relatively small. Slightly more than 5% of foreign-born residents are younger than 18, compared to just over 19% of the city population overall.

Race and Ethnicity
Nearly half (46%) of foreign-born Salt Lake City residents identify as Hispanic or Latino, reflecting the 47% originating in Latin America.

The majority of Salt Lake City’s foreign-born residents identify as one of three groups: 29% White, 24% Asian, and 29% as Some Other Race. Smaller shares of foreign-born residents identify as Black or African American (7%), Pacific Islander (4%), American Indian (1%), and two or more races (6%).

Households
In Salt Lake City, 55% of foreign-born led households are married-couple family households compared to only 47% of households led by native-born individuals. Foreign-born led households tend to be larger than native-born led households, with 3 people on average compared to 2.2 people. Foreign-born led families also tend to be larger, with 3.8 members compared to 3.1 members in native-born led families.

Changes in Foreign-Born Age, Race, and Households
Like the rest of the city and state, Salt Lake City’s foreign-born population is aging. The median age for the foreign-born population was 38.7 in the 2017-2021 estimate period, up from 34.8 in the 2007-2011 period. Over the last three 5-year estimate periods, the proportion of school (5 to 17) and college-age (18-24) foreign-born residents decreased while the proportion of 45 to 64-year-olds increased.

Shifts in the race of foreign-born residents appear across the last three estimate periods, as well. The share of both White and Hispanic or Latino foreign-born residents decreased, especially between the 2007-2011 and 2012-2016 estimates. Meanwhile, the share of Asian and multiracial foreign-born residents increased.

Foreign-born-led households and families have decreased in size over the last ten years. Household size and family size decreased between the 2012-2016 and 2017-2021 estimates, with household size dropping from 3.25 to 2.96 and family size dropping from 4.09 to 3.75.
Language Characteristics: Primary Language and English-Speaking Ability

Language Spoken at Home

More than 4 in 5 (83%) foreign-born Salt Lake City residents speak a language other than English at home. Among foreign-born residents five years and older, 42% speak Spanish at home. Foreign-born Spanish speakers represent the largest linguistic group within the foreign-born population and compose almost half of Salt Lake City residents who speak Spanish at home.

In addition, 1 in 5 (20%) foreign-born Salt Lake City residents speak Asian or Pacific Island languages, including Chinese, Japanese, Korean, Burmese, Karen, and Samoan. Another 16% of foreign-born residents speak Indo-European languages, including Italian, German, Hindi, and Punjabi. The remaining 5% speak languages within the Census Bureau’s “Other Languages” category, which includes native languages of North America, Arabic, Hebrew, and languages from across Africa.

English Speaking Abilities

The majority (58%) of Salt Lake City’s foreign-born residents speak English “very well” or as their only language. Speakers of Indo-European languages are most likely to speak English “very well,” while Spanish speakers are the least likely.

More than 1-in-5 (21%) foreign-born households in Salt Lake City are estimated to be limited English speaking households, or households in which all members age 14 and older speak English less than “very well.” These foreign-born households compose approximately 90% of Salt Lake City’s limited English speaking households.

Changes in Foreign-Born Languages Spoken at Home and English-Speaking Ability

Across the last three estimate periods, the proportion of foreign-born city residents who spoke only English increased from 11.5% to 17%. English speaking abilities among those who spoke a language other than English also increased. Estimates from the 2017-2021 period show 58% of multilingual residents speak English “very well,” up from 42% in the 2007-2011 period. A decrease in the share of limited English households further demonstrates improving English language ability among Salt Lake City’s foreign-born residents. Currently, 21% of foreign-born households qualify as limited English households, down from 38% in the 2007-2011 estimates.
Socioeconomic Characteristics: Education, Employment, Income, and Poverty

Education

Nearly one-third (32%) of foreign-born Salt Lake City residents over age 25 hold bachelor’s degrees or higher graduate or professional degrees compared to 54% of the native-born city population. Recently arrived foreign-born residents have the highest educational attainment rates within the foreign-born population. These residents, who entered the United States in 2010 or later, are nearly twice as likely as earlier groups to hold bachelor’s degrees.

Employment

More than 1 in 6 Salt Lake City workers is foreign-born. Between 2017 and 2021, 71.6% of foreign-born Salt Lake City residents participated in the labor force, and 3.2% of foreign-born residents experienced unemployment. These rates are similar to the city population overall.

Foreign-born workers are overrepresented in four industries in Salt Lake City. In the construction, manufacturing, and transportation, warehousing and utilities industries foreign-born workers make up more than a quarter of the workforce. Workers born outside the U.S. are also overrepresented in the arts, entertainment, recreation, accommodation and food services industry, in which they compose one-third of the workforce.

The occupations of foreign-born residents differ based on entry period into the United States. Higher shares of residents who entered the United States during the past decade hold positions in management, business, science, and the arts than their peers who arrived earlier.

Income and Poverty

In Salt Lake City, foreign-born led households earn a median household income of $53,342 (in 2021 dollars) compared to $68,669 for native-born led households. Nearly 1 in 5 (19%) foreign-born residents earn an income below the poverty level, compared to 14% of native-born city residents.

Poverty rates differ within the foreign-born population based on citizenship and year of entry. Foreign-born residents who become naturalized citizens and those who entered the United States before 2000 have both lower poverty rates than their peers who entered the U.S. between 2000 and 2009 or who arrived in 2010 or later.

Languages Spoken in Salt Lake City School District

Additional insights on language can be gained from the Salt Lake City School District, where data indicates students spoke 86 different languages in 2022. Spanish was the second most common language after English, followed by Karen, Somali, Burmese, and Swahili. Fewer than 20 students spoke 67 of the documented languages, indicating the presence of many small language communities throughout the city.

Source: Utah State Board of Education (2023). District Native Language Counts, 2022-2023
before 2000 experience similar poverty rates to the total city population (13%). Foreign-born individuals who arrived in the U.S. more recently or have not become naturalized citizens experience poverty at higher rates.

**Changes in Foreign-Born Socioeconomic Characteristics**

Changes across the last three estimate periods show improving educational attainment and declining poverty rates for Salt Lake City’s foreign-born population. The share of foreign-born residents holding bachelor’s degrees or higher increased by almost eight percentage points between 2007-2011 and 2017-2021 estimate periods, from 24.0% to 31.7%. Over the same period, the percentage of foreign-born residents with earnings below the poverty level dropped more than six percentage points.

Employment patterns for Salt Lake City’s foreign-born population also shifted across the last three estimate periods. The share of foreign-born residents employed in management, business, science, and arts occupations increased while the percentage employed in natural resources, construction, and maintenance occupations decreased.

**Data Notes**

The primary data source for this report is the American Community Survey (ACS), a sample-based survey conducted by the U.S. Census Bureau exploring social, economic, housing, and demographic characteristics of the U.S. population. This report relies on the 5-year estimate data product, which combines responses collected throughout a five-year period. Additional data provided by the Utah State Board of Education and from historic decennial census reports add detail to findings concerning the city population.

The ACS 5-year estimates are not a tool to investigate annual changes in a population and cannot isolate pre or post COVID-19 population characteristics. Additionally, the data in this report describes only the foreign-born population and does not include the native-born children who live in many foreign-born led households.
