Travel and tourism is one of Utah’s top ten industries, supporting one in 11 Utah jobs and generating over a billion dollars in state and local tax revenue annually.
The State of Utah's Travel and Tourism Industry, 2019

Analysis in Brief

Domestic and international travelers and tourists visit Utah year-round to participate in a wide range of activities. Since 2015, visitor spending in Utah's economy has increased by an average 5.1% annually. In 2019, travelers directly spent a record $10.06 billion in Utah, generating an estimated 141,500 total Utah jobs, and $1.34 billion in state and local tax revenue. Utah's national parks and state parks experienced record visitation in 2019 as well.

This report presents a high-level review of Utah's travel and tourism industry for 2019. It captures visitor spending and visitation trends, employment and wages, fiscal impacts, lodging data, and a snapshot of general tourism industry indicators. This report also recaps 2019 travel and tourism news events and provides an industry outlook, including a discussion regarding COVID-19's impact on the travel and tourism industry in 2020 and beyond.

Key Points include the following:

- **Spending** – Visitors directly spent a record $10.06 billion in the Utah economy in 2019, a 3.3% year-over-year increase.
- **Jobs** – Utah's travel and tourism industry accounted for an estimated 141,500 total jobs in 2019, a 4.0% year-over-year increase. Approximately 1 in 11 Utah jobs is supported by visitor spending, either directly or indirectly.
- **Tax Revenue** – The $10.06 billion in direct visitor spending—leading to $16.52 billion in total visitor-related spending—generated an estimated $1.34 billion in total tax revenue.
- **Accommodations** – Taxable sales in the accommodations sector neared $2.2 billion in 2019, a 5.2% year-over-year increase; however, for the second consecutive year, average statewide occupancy rates and daily room rates remained flat.
- **Visitation** – Utah's national parks and state parks experienced record visitation in 2019.

This research was sponsored by the Utah Office of Tourism.
Utah is home to mountains, forests, red rock and Great Basin deserts, and the largest saltwater lake in the Western Hemisphere. In addition to its year-round outdoor recreation opportunities, Utah has a Native American history and pioneer heritage, a growing arts and culture scene, and a variety of conference and convention venues, all of which attract leisure and business visitors annually.

In 2019, travelers spent a record $10.06 billion in Utah, generating an estimated $1.34 billion in total state and local tax revenue. Travel and tourism spending also supported an estimated 141,500 total Utah jobs. Utah’s national parks and state parks reported record visitation. Once again, Utah visitors purchased more hotel rooms and spent more money on Utah arts, entertainment, recreation, and restaurants than ever before.

Travel & Tourism Industry – 2019 Year in Review

Although 2019 began in the midst of the longest U.S. government shutdown in history, Utah's travel and tourism sector experienced continued economic growth in 2019, including record-level visitor spending, jobs and wages, state and local tax revenue, and national and state park visitation.

During the year, Utah’s Board of Tourism Development allocated more than $4.6 million in cooperative marketing matching funds, as well as $83,080 in additional matching funds through its Cafeteria Co-op Marketing Program. Cooperative marketing programs enable destination-marketing organizations such as convention and visitor bureaus, county tourism offices, and nonprofit organizations to combine their marketing dollars with Utah Office of Tourism (UOT) matching funds to promote a wide variety of statewide destinations and events.

In addition, the UOT continued to uphold its Red Emerald Strategic Plan, a community-led vision aimed at attracting quality visitation by promoting Utah’s “rarefied, distinctive, and unique” assets. In concert with the Red Emerald plan, the UOT launched its three-season “What Lies Between” marketing campaign, spreading the word about special places in Utah that “lie between” its popular national parks. Interestingly, for the third year in a row, Utah state park visitation continued to accelerate while Utah national park visitation continued to decelerate.

In January 2019, Headwaters Economics released a report that showed rural recreation communities attract more new residents and higher incomes than rural non-recreation counties. Positive net migration occurred in six of Utah’s 14 counties defined by Headwaters as “rural.” Five of these six rural counties with positive net migration were defined by Headwaters as “recreation-dependent counties.” The average household income of new residents moving into a county was generally higher in Utah’s rural recreation counties compared with its rural non-recreation counties. Likewise, the fastest growth in average earnings took place in Utah’s recreation-dependent rural counties.1

A Legislative audit of transient room tax revenue (i.e., tourism promotion funding) took place in early 2019 with a final Legislative report released in April 2019. The audit sought to determine whether the sampled counties were using their transient room tax revenue as per Utah code. The auditors discovered that counties desired greater flexibility in spending these tax dollars, such as allowing more room for spending on tourism-related projects and visitor impact mitigation. After the release of the audit report, Rep. Albrecht and Sen. Vickers introduced H.B. 280, which presented desired modifications to transient room tax expenditure requirements and reporting specifications. This bill was signed by Governor Herbert on March 30, 2020.

During the summer of 2019, Moab launched its “Do It Like a Local” marketing campaign to educate and encourage responsible and sustainable travel. The campaign’s website offers information on preventing environmental degradation, provides tips on avoiding the need for search and rescue, and encourages supporting local businesses. Moab’s tourism director noted that this was the first sustainable tourism marketing campaign ever launched in the state.

In August 2019, the UOT initiated a strategic planning process that involved stakeholder surveys and interviews. UOT’s goal was to define key priorities, increase collaboration with stakeholders, identify progress-measuring tools, and ultimately strengthen the alignment between UOT’s goals, programs, and budget. The study was completed in late 2019. In September, the Tourism Industry Association hosted its annual Utah Tourism Conference in Logan at Utah State University. The conference, with a theme of “Make Your Mark,” convened hundreds of local and national travel partners to share tourism and travel industry information, ideas, and best practices.

It is also important to note that throughout the year, work continued on the SLC International Airport’s $4 billion expansion project (aka “The New SLC”). Phase one of the airport redesign opened in mid-September 2020. In addition, the contract to construct a 26-story, 700-room, convention hotel adjacent to the Salt Palace Convention Center in downtown Salt Lake City was finalized in 2019 and hotel construction began in early 2020. These are two major projects that could have a significant impact on Utah’s travel and tourism economy in the future.

According to the U.S. Travel Association, in 2019 U.S. travel spending increased 3.5% nationally and 3.3% in Utah. Tourism
Economics reported a –0.6% year-over-year decline in international arrivals to the U.S. and a –2.7% decrease in Utah. Year-over-year domestic person-trips, however, increased 1.9% in the U.S. and 6.1% in Utah. (Figure 1)

**Travel & Tourism 2020 Outlook**

Though U.S. travel remained strong in 2019, industry forecasters could not have anticipated what was around the corner. In early 2020, the COVID-19 pandemic rattled the world—and particularly the travel and tourism industry—with unprecedented force. As positive coronavirus cases surfaced in the U.S., travel and tourism–related businesses responded by shutting down or significantly altering operations. As of June 2020, 45 states and the District of Columbia had enacted some form of stay-at-home order following the U.S. outbreak. Commercial airlines grounded flights, lodging facilities temporarily closed their doors to visitors, and restaurants transitioned to takeout or delivery service only.

In June 2020, the U.S. Travel Association revised their original travel forecast (February 2020) to reflect COVID’s impact. Their updated 2020 numbers show a predicted 44% year-over-year decline in total traveler spending, a 64% decline in international arrivals to the U.S., and a 30% decline in domestic person-trips. In fact, the U.S. Travel Association does not foresee visitor spending or international visitation returning to 2019 levels for another four to five years, and domestic person-trips for another three years. The COVID-19 pandemic has had and will continue to have a significant impact on the travel and tourism industry, particularly in the form of tourism-related business closures and job losses.

**Travel & Tourism: Spending & Visitation**

Utah visitors directly spent a record $10.06 billion in 2019. Domestic visitors contributed 91.6% and international visitors 8.4% of this total spending amount. When adjusted for inflation, Utah visitor spending increased 3.3% year-over-year and an
annual average 5.1% over the past five years. Of the $10.06 billion in visitor spending, nonresident visitors spent an 85.6% share and Utah residents a 14.4% share. Overall, leisure travelers contributed 81.7% of the spending and business travelers 18.3%. Resident travelers spent smaller relative shares on dining and lodging and larger relative shares on shopping, groceries, and entertainment than nonresident visitors. Overall, Utah visitors spent the largest share of dollars on auto transportation, which includes gasoline purchases, car rentals, auto repairs, and parking fees. (Figures 2–4, Table 1)

annual average 5.1% over the past five years. Of the $10.06 billion in visitor spending, nonresident visitors spent an 85.6% share and Utah residents a 14.4% share. Overall, leisure travelers contributed 81.7% of the spending and business travelers 18.3%. Resident travelers spent smaller relative shares on dining and lodging and larger relative shares on shopping, groceries, and entertainment than nonresident visitors. Overall, Utah visitors spent the largest share of dollars on auto transportation, which includes gasoline purchases, car rentals, auto repairs, and parking fees. (Figures 2–4, Table 1)

Taxable sales in Utah’s leisure and hospitality sector—which includes the arts, entertainment, recreation, accommodations, and foodservice sectors—increased 11.8% over the last five years and 2.9% year-over-year (adjusted for inflation).² (Table 2) Leisure and hospitality sector sales generally reflect Utah tourism industry trends since travelers and tourists make around 30% of arts, entertainment, and recreation purchases, 85% of accommodations purchases, and 20% of foodservice purchases on a statewide basis. Regionally, the majority of leisure and hospitality sales took place along the Wasatch Front and North Mountains regions, followed by the Southwestern Utah and Canyon Country regions (see Figure 6 and the “Terms” section of this report for travel region definitions). In 2019, 63% of all leisure and hospitality sales took place in the top three counties of Salt Lake, Utah, and Summit. (Figures 5–6)

In 2019, California, Nevada, and Idaho were once again the top three sources of domestic nonresident visitors to Utah; likewise, Canada, China, and Germany continued to hold the top three spots for international arrivals. It is interesting to note that the international share of deplaned passengers at the Salt Lake City International Airport has doubled since 2011. (Figures 7–9)
Park Visitation

Utah's national parks and national monuments, recreation areas, and historic sites ("national places") and state parks draw resident and nonresident visitors annually. According to the National Park Service (NPS), in 2019, national park visitors spent $1.2 billion in Utah’s "gateway communities," generating 18,700 jobs, $605 million in labor income, and $1.8 billion in total output. Utah national park visitors spent the largest share of dollars on hotels, restaurants, and gasoline. (Figure 10)

In 2019, Utah's five national parks received a combined record 10.7 million recreation visits, a 0.5% increase from 2018 and a 27.6% increase from 2015. Utah's national parks have experienced a deceleration and leveling off of visitation during the past four years. This slowdown has been attributed to a variety of factors, including the economy, government shutdowns, gas prices, weather, and the natural aftereffects of two historic visitation years (2016 park centennial and 2017 solar eclipse). (Figure 11)
According to the NPS, in 2019 the majority of Utah’s national park visits (65%) occurred between the months of May and September, followed by the “shoulder” months of April and October (19%). The NPS reported slightly more visitors during the summer of 2019 and slightly fewer visitors during the winter and spring of 2019 compared with the previous year. (Figure 12)

Utah’s “Crown Jewel” Zion National Park was the only Utah national park to experience an increase in visitation from 2018 to 2019 (3.9%). All four other national parks experienced a decline in year-over-year visitation, with Bryce Canyon experiencing the greatest visitation drop (~3.3%). (Table 3)

In addition to five national parks, Utah is home to 11 national places. In 2019, Glen Canyon National Recreation Area received the largest number of recreation visitors (over 4 million) and had the largest year-over-year growth (an additional 111,000 visitors). Golden Spike National Monument experienced the fastest year-over-year increase in visitors (79.9%), due largely to the monument’s events held to celebrate the 150th anniversary of the completion of the transcontinental railroad. Overall, in 2019, Utah national place visitation remained flat. (Figure 13).

In fiscal year 2019, Utah state parks reported a combined 7.4 million recreation visits (a new record), with annual total visits increasing 10.6% from the previous year. In 2019, Dead Horse Point experienced the greatest total visitation with close to 1 million visitors and had the largest year-over-year visit increase at 206,819. Gunlock State Park had the fastest year-over-year visitation increase (74.2%). (Table 4)

Over the past few years, national park visitation has decelerated while state park visitation has accelerated. This may be in part due to a UOT marketing shift towards promoting Utah’s less-visited, but equally stunning, state parks. In 2016, the Utah Office of Tourism launched its “Road to Mighty” ad campaign and, in 2019, its “What Lies Between” campaign. Both marketing campaigns encourage visitors to explore places along the way.

and in-between Utah’s national parks. Data show that national park and state park visitation increased at about the same rate in 2015, but have trended differently since then. (Figure 14)

**Ski Industry**

The 2019–2020 ski season met with an unusual fate as the COVID-19 pandemic swept across the nation in early 2020, disrupting ski resorts in mid-March followed by complete resort shutdowns by April. However, despite the shortened 2019–2020 season, Ski Utah reported the fourth highest visitation (4.4 million skier days) and the second highest visitor spending ever ($1.55 billion). In fact, Utah skier spending was only 7% shy of 2018–2019 record spending despite the shortened season; also, per-visit skier expenditures were at their highest level yet. This indicates that 2019–2020 was likely poised to be another record year for Utah resorts. According to RRC Associates, during the 2019–2020 season, skiers and snowboarders spent the largest dollar shares on lodging, lift passes, and dining. California, Texas, and New York were once again the top three domestic sources of nonresident visitors who enjoyed Utah’s “Greatest Snow on Earth.” In addition, nearly one out of 14 skiers and snowboarders visited Utah’s slopes from outside of the U.S. (Figures 15–18)

**Conferences & Conventions**

According to Visit Salt Lake, 2019 was another record-breaking year for Salt Lake County’s conference and convention sector. In fact, it was Salt Lake’s fifth consecutive record year for hotel room nights booked (819,660 room nights), or a 3.7% year-over-year increase. A combined total of 665,289 convention delegates, show and meeting attendees, and sporting/special event visitors spent an estimated $330.6 million in Salt Lake County’s economy. In addition, Salt Lake’s convention center hotel contract, which was completed in 2019, directed

construction to begin in early 2020. The 26-story, 700-room, tower is currently being built adjacent to the Salt Palace Convention Center and will allow Visit Salt Lake to secure more, and larger, future events.

Sundance Film Festival

The Sundance Film Festival, which is held each January in Park City, draws a large number of out-of-state visitors to Utah. Since 2017, Y2 Analytics has conducted economic impact studies on the film festival. Over the past three years, the festival’s nonresident attendee share has decreased from one-in-two attendees to one-in-three. In 2019, non-resident visitor spending was down 4.9% from the prior year to $149.1 million, economic impact was down 4.7%, and jobs supported by spending dropped 8.2%. (Table 5)

Travel & Tourism Employment

Visitor spending directly and indirectly generates and supports Utah jobs. In 2019, the record $10.06 billion in direct visitor spending generated close to 94,200 direct jobs and supported around 47,300 additional indirect and induced jobs, summing to 141,500 total jobs statewide (up 4.0% from 2018) (Figures 19–20). When considered as its own employment sector, travel and tourism ranks eighth in Utah based on number of direct jobs by industry.

Specifically looking at private leisure and hospitality sector jobs (i.e., arts, entertainment, recreation, accommodations, and foodservice) as a share of total private jobs, the Canyon Country region had the largest share at 43.2%. Over the past 10 years, the private leisure and hospitality employment sector has grown in 26 of 29 counties. (Figures 21–22)

Source: Kem C. Gardner Policy Institute analysis of U.S. Bureau of Labor Statistics and Utah Department of Workforce Services data
In 2019, the $10.06 billion in direct visitor spending, which led to $16.52 billion in total visitor-related spending through indirect and induced spending effects, generated an estimated $1.34 billion in state and local tax revenues. (Figures 23–24) When totaled statewide, all tourism-related tax revenues increased from 2018, even after adjusting for inflation. (Figure 25) Regionally, the Eastern Utah, North Mountains, and Northwestern regions experienced the largest year-over-year growth in county transient room tax collections. (Figure 26) At a county level, Morgan and Uintah experienced over 30% revenue increases from the prior year, while Piute and Emery were the only two counties that had lodging sales tax revenue declines. Salt Lake, Summit, and Washington counties collected the largest amount of county transient room tax statewide, accounting for 66% of total collections. (Figures 27–28)

Tracking transient room tax revenue over time reveals the seasonality of each Utah travel region. In 2019, all regions but North Mountains received the greatest visitation during the spring and summer months. In contrast, the North Mountains region collected the most transient room tax revenue during the winter months, reflecting the popularity of skiing and snowboarding in the Park City area. In addition, the Wasatch Front region experienced the greatest visitation in summer with a decline in the fall (likely due to the reduction in conference and convention activity during the fall months). (Figure 29)

**Hotel Occupancy & Rates**

The average annual statewide occupancy rate in 2019 (63.4%) was slightly lower than in 2018 (64.1%); likewise, average daily room rates and revenue per available room remained flat. Possible explanations for these temperate year-over-year numbers could be a greater number of visitors staying in short-term rentals (vs. hotels) and/or a larger 2019 hotel room supply (vs. 2018). On a statewide basis, Utah hotels experienced the highest occupancy in March (spring break) and June–September (summer break). Summit, Kane, Wayne, San Juan, and Garfield had the greatest year-over-year percent increase in average daily room rates, while Summit had the greatest average daily room rate increase ($14), followed by Kane ($8). (Figures 30–31)

**Short-Term Rentals**

Over the past 10 to 15 years, short-term rentals have become popular lodging alternatives to hotels. With the rise of the internet, online marketplaces like Airbnb, HomeAway, and VRBO have allowed property owners from across the globe to advertise their rental properties to a worldwide audience. Vacation rental online marketplaces allow prospective guests to choose from a variety of rental listing types, including private rooms, apartments, entire houses, villas, RVs, and even tent spaces. Guests can reserve and pay for their rental, including all fees and taxes, online with ease. According to AirDNA, there were 6,177 available short-term rentals in Utah in June 2016 and 21,430 available short-term rentals in June 2019—a 247% increase.4 (Figure 32)
Travel & Tourism Industry — Other Indicators

Utah’s travel and tourism industry performed well in 2019. Private jobs, wages, and sales grew in every leisure and hospitality sector reviewed in this report. (Tables 6–9)

Research Methods

This section provides insight regarding how the Gardner Institute conducted its analysis. The Institute defines key terms for conceptual clarity and economic impact and estimated tax revenue modeling in this report.

Terms

Employment is a measure of the average number of full-time and part-time jobs. Employment data from the Utah Department of Workforce Services and the U.S. Bureau of Labor Statistics include virtually all company and government employees. Employment impacts include the self-employed, as well as employees.

An industry is a category for grouping similar types of companies. For uniformity, government agencies and researchers in the U.S. follow the North American Industry Classification System (NAICS), which federal agencies periodically update as new types of companies become common enough to warrant a new category. However, the travel & tourism industry is not one distinct industry but rather an assortment of industries, comprised of goods and services purchased prior to, during, and even after a trip. The travel and tourism industry can be characterized as an export industry when travel-related goods and services are purchased in Utah by nonresident visitors.

Leisure and Hospitality Employment. The leisure and hospitality employment sector, as per the U.S. Bureau of Labor Statistics, comprises the arts, entertainment, recreation, accommodation, and foodservice industries (e.g. NAICS 711–722). Statewide, around 65% of all travel and tourism–related jobs are in the leisure and hospitality sector, while the other 35% are in several different sectors (e.g. transportation, real estate, rental and leasing, retail, personal services, etc.).

Travel Regions. For purposes of this report, Utah is divided into seven travel regions, organized by counties with similar demographics, economies, natural amenities, and recreational opportunities.

Wasatch Front consists of Davis, Salt Lake, Utah, and Weber counties. This region is the state’s metropolitan hub and is bordered by mountains on the east and lakes on the west. Travelers visit the Wasatch Front to ski and/or recreate outdoors,
attend arts and cultural events, visit historic, religious, and other local attractions, attend conventions, conferences, and trade shows, attend sporting events, shop, and dine.

**Canyon Country** consists of Garfield, Grand, Kane, San Juan, and Wayne counties. This region, which is home to four of Utah’s five national parks, attracts visitors to its unique geology, recreational opportunities, and scenic beauty.

**Central Utah** consists of Beaver, Juab, Millard, Piute, Sanpete, and Sevier counties. This region, located in the “heart” of the state, comprises rolling hills, agricultural lands, historic sites, and popular ATV trail systems.

**Eastern Utah** consists of Carbon, Daggett, Duchesne, Emery, and Uintah counties. This region offers fly-fishing, boating, and river rafting opportunities in and around Flaming Gorge National Recreation Area, as well as abundant paleontological, archaeological, and geological sites.

**North Mountains** consists of Cache, Rich, Summit, and Wasatch counties. This region includes large portions of Wasatch-Cache and Uinta National Forests, mountain topography, and eight state parks.

**Northwestern Utah** consists of Box Elder and Tooele counties. This region features basin and range geography with rugged mountains, endless vistas, and the unique Great Salt Lake ecosystem.

**Southwestern Utah** consists of Iron and Washington counties. Located in the southwestern corner of Utah, Southwestern Utah is the gateway to Zion National Park and is the warmest region in the state, allowing for year-round golf, outdoor theater, and general recreation and leisure.

**Traveler Types.** Utah visitors are divided into two categories: residents and nonresidents. Resident travelers are Utahns who travel at least 50 miles away from home (one-way) for work or leisure either for a day trip or overnight stay. Nonresident travelers comprise both domestic and international travelers. Domestic nonresident visitors are American travelers who are not Utah residents, and international visitors include all travelers from outside of the U.S.

**Modeling Economic and Fiscal Impacts**

The travel and tourism industry supports individuals and businesses in many different industries. Total economic impacts include direct, indirect, and induced impacts. When Utah visitors purchase from Utah businesses, these are the direct effects, including the employees and earnings that are supported by these purchases. These businesses purchase inputs from other local businesses, who in turn may purchase from other local businesses. These rounds of activity produce indirect employment and earnings effects. Then, direct and indirect employees spend a portion of their earnings in the local economy, spurring additional “induced” effects. In the tourism industry, a direct spending example would be a visitor paying their hotel bill. Indirect spending would be the hotel owner purchasing bed sheets from an in-state linen company. Induced spending would include hotel employees and linen company employees spending their paychecks on personal purchases (e.g. rent, groceries, health care, etc.).

The U.S. Travel Association provided the Utah Office of Tourism with direct spending numbers. To estimate the indirect and induced impacts that resulted from this direct activity, the Institute customized a travel and tourism economic impact model for Utah. This customized model utilizes 2017 IMPLAN economic impact software as well as U.S. Bureau of Labor Statistics and U.S. Bureau of Economic Analysis data.

To estimate fiscal impacts, the Gardner Institute customized a travel and tourism fiscal impact calculator. This customized model utilizes both the 2017 IMPLAN economic modeling software and the Gardner Institute fiscal calculator. The Institute's fiscal calculator uses effective tax rates to estimate the fiscal impacts related to the travel and tourism industry. Inputs to the model are employment, value added, and labor income results generated by IMPLAN software (based on total direct visitor spending entered as industry “output” and margined by the software). The underlying fiscal calculator analysis relies on historical data and assumes a linear relationship between taxes paid and personal income, earnings, industry output, and employment.

The Gardner Institute estimated tax revenue impacts for state and local sales taxes, personal and corporate income taxes, local property taxes, and other state taxes and fees (e.g. travel and tourism portion of fuel tax revenue, boat registration fees, alcohol and tobacco taxes, etc.). The Institute limited its model to state and local governments because Utah federal tax collections have a relatively small impact on federal government receipts. Similarly, the Institute assumed federal spending in the state in a given year is largely independent of economic activity in Utah's industries, including the travel and tourism–related industries.
