

May 2023 Utah Consumer Sentiment

June 5, 2023

Utah's Consumer Sentiment Steady in May

Utah's consumer sentiment was essentially unchanged in May (71.0) compared to April (70.5), according to the Kem C. Gardner Institute's Survey of Utah Consumer Sentiment. A similar survey by the University of Michigan found sentiment fell from April (63.5) to May (59.2) among Americans as a whole.

The index remained relatively unchanged for the third straight month, reflecting continued uncertainty among Utahns about the economy as they face mixed economic signals. Debt ceiling discussions occurring in D.C. during the survey time period could have added to uncertainty among Utahns. Negative economic signals include slowing economic growth in the U.S., higher interest rates, and the ongoing banking turmoil that began with the collapse of Silicon Valley Bank in March. Positive economic signals Utahns may notice include a strong local labor market and improvements to inflation. On net, the positive and negative signals don't appear to have influenced Utah consumers, which consistently remains above U.S. sentiment levels.

Table 1 shows responses to questions that define "sentiment" for Utah (Gardner Institute survey) and the U.S. as a whole (from the University of Michigan). These questions are combined into an overall index, also shown in Table 1.

Questions Comprising the Index

Utah's survey of consumer sentiment includes five questions concerning current and expected future economic conditions. These questions are identical to those included in the University of Michigan's Survey of Consumer Sentiment. They are the first five questions shown in Table 1. Two of these questions refer to business or economic conditions in the country as a whole (rather than in one's home state, for example). We supplement these two questions with alternative versions that refer to the state of Utah rather than the country as a whole.

Alongside each question is shown its index score—higher scores indicate greater confidence. The index score is calculated as the difference in the percentage of respondents who give a "favorable" reply and the percentage of respondents who given an "unfavorable" reply, plus 100. For example, Utah's score for the first question is 93. This means the "unfavorable" replies outnumber the "favorable" replies by 7 percentage points.

Consumer Sentiment Index: Utah and U.S.

Table 1: Responses to Questions Comprising the Utah Consumer Sentiment Index, 2023

Question	April 2023			May 2023		
	Favorable	Unfavorable	Index	Favorable	Unfavorable	Index
Would you say that you (or you and your family living there) are better off or worse off financially than you were a year ago?	39%	44%	96	38%	45%	93
Do you think that a year from now you (or you and your family living there) will be better off financially, or worse off, or just about the same as now?	32%	22%	109	33%	22%	110
Regarding business conditions in the country/Utah as a whole, do you think that during the next twelve months we'll have good times financially, or bad times?	20%	71%	49	20%	70%	51
	36%	50%	87	41%	47%	95
Looking ahead, which would you say is more likely, that in the country/Utah as a whole we'll have continuous good times during the next five years or so, or that we will have periods of widespread unemployment or depression?	30%	62%	67	22%	69%	53
	47%	44%	103	45%	47%	97
About the big things people buy for their homes, such as furniture, a refrigerator, stove, television, and things like that. Generally speaking, do you think now is a good or bad time for people to buy major household items?	29%	60%	68	29%	57%	71
Gardner Consumer Sentiment for Utah	70.5			71.0		
Michigan Consumer Sentiment for U.S.	63.5			59.2		

Note: Percentages shown in the table have been rounded.

Calculating the Index

The University of Michigan calculates the Index of Consumer Sentiment as a ratio. The numerator is the sum of the differences between the percent responding favorably and the percent responding unfavorably, plus 500 (so that the numerator is the sum of the index scores shown in Table 1). For example, for the first question shown in Table 1, this difference is -4 percentage points for Utah in April (percentages shown in the table have been rounded). The denominator is the value the numerator took in a particular historical year, rescaled. For Michigan, this value is 6.7558 and refers to the year 1966. To this ratio Michigan adds a small amount—2.0—to account for changes to the survey during its early years. We incorporate this reference-period value from the Michigan survey into the Utah indices.

Survey Methodology

The Utah Consumer Confidence Survey uses key questions from the University of Michigan’s Surveys of Consumers. These questions measure residents’ views of the present economic situation and their expectation for the economy in the future. Data gathered from the key questions are used to create the consumer confidence index for Utah. Demographic questions are included on the questionnaire to allow for additional analysis of the data and to assess the representativeness of the sample. The 406-interview sample yields a +/- 5.0% tolerated error on total data. All survey interviews are conducted by telephone by a professional data collection company. The sample is drawn to be proportional to the population of Utah’s 29 counties. Weighting of demographic data may be used to ensure the sample more closely aligns with Census data for Utah adult residents.
